QUESTION 3

One way of tackling rising energy costs and reducing our carbon footprint is to insulate our homes to a modern standard. This is sometimes difficult to achieve in cottages that are 200 years old. The other way of achieving this is with local renewable energy generation. Are you in favour of local energy generation?

QUESTION 4

Do you feel that this can be done at individual household energy level utilising micro renewable technologies?

- 24 out of 80 residents said yes
- 19 out of 80 residents said no
- 26 out of 80 residents said they don't know
- 0 out of 80 residents did not answer
- 11 out of 80 residents answered 'not relevant'

QUESTION 6

Four locations for a small community wind turbine of 6kw capacity have been proposed (tick one or more of the boxes where you think the turbine would be best suited).

- 5 out of 80 residents prefer the front of the hall
- 46 out of 80 residents prefer behind the museum
- 6 out of 80 residents prefer beside the ferry shed
- 37 out of 80 residents prefer the back of the island
- 12 out of 80 residents do not want a wind turbine to be located anywhere

QUESTION 7

A 6kw wind turbine could be used to power a heat pump which would produce very low cost heating for The Community Hall as well as providing an income for the community. This is likely to be around £4600 per annum. What would your preferred use of this income be? (you can tick more than one selection)
